

Vocallabs.ai Product Teardown – Product Intern Assignment

Candidate: Saurabh Kumar

Feedback 1 – GTM & ICPs: Mixed Positioning Creates ICP Confusion

Observed: Homepage positions Vocallabs as 'Voice AI Infrastructure for Developers' while solution pages target business users through Appointment Bots, FAQ Bots, Lead Qualification Bots, Debt Collection Bots and more.

Problem: The platform simultaneously targets developers and business teams, creating confusion around the primary customer persona.

Ship Instead: Create two entry paths: Developer (APIs, SDKs, Sandbox, Documentation) and Business Teams (ROI Calculator, Industry Solutions, Case Studies).

Solution Mockup:

Which best describes you?

[Developer] [Business Team]

Developer → APIs, SDKs, Sandbox

Business → ROI Calculator, Industry Solutions, Case Studies

Priority: P0

Feedback 2 – Features & Services: Industry Workflow Clarity

Observed: Industries such as Healthcare, Banking, Insurance, FMCG and Automotive are listed, but exact workflows are not immediately clear.

Problem: Users must infer how the platform solves their specific business problem.

Ship Instead: Create workflow-focused industry pages.

Solution Mockup:

Healthcare Solutions:

- Appointment Scheduling
- Patient Follow-Ups
- Prescription Reminders
- Insurance Verification

Priority: P0

Feedback 3 – Competitor Analysis: Missing Outcome-Based Messaging

Observed: The platform highlights capabilities but provides limited visibility into measurable business outcomes.

Problem: Decision-makers buy outcomes rather than features.

Ship Instead: Add ROI metrics and customer success indicators.

Solution Mockup:

Debt Collection Agent

Calls Automated: 82%

Cost Reduction: 58%

Recovery Rate: +24%

Priority: P1

Feedback 4 – UX: Technical Errors Exposed to End Users

Observed: Mobile application displayed a backend GraphQL/Hasura error when calls failed.

Problem: Technical system messages reduce trust and confuse end users.

Ship Instead: Replace backend errors with user-friendly communication.

Solution Mockup:

Unable to Connect

Your call could not be completed.

[Retry] [Contact Support]

Priority: P0

2:03

Real-time voice communication

Phone Number

Feedback 5 – Potential Collaborations: CRM Ecosystem Opportunity

Observed: Lead qualification, customer support and collections workflows are often managed within CRM systems, but CRM partnerships are not prominently showcased.

Problem: Businesses may perceive Vocallabs as a standalone tool rather than part of their existing workflow stack.

Ship Instead: Promote deep integrations with Zoho CRM, Salesforce, HubSpot, Freshsales and LeadSquared.

Solution Mockup:

Works With:

Zoho CRM | HubSpot | Salesforce | LeadSquared | Freshsales

Priority: P1

Prioritization Matrix

P0: Mixed Positioning, Industry Workflow Clarity, Mobile Error Handling

P1: Outcome-Based Messaging, CRM Partnerships
